

Biomonitoring California Designated Chemicals October 2015

The designated chemicals for the California Environmental Contaminant Biomonitoring Program^a (also known as Biomonitoring California) are provided in this list. Designated chemicals consist of those substances that are included in the Centers for Disease Control and Prevention's (CDC's) biomonitoring studies^b and additional chemicals that are recommended by the Scientific Guidance Panel (SGP) for Biomonitoring California. Designated chemicals are the pool of chemicals from which the SGP can recommend priority chemicals for biomonitoring.

Targets for measurement in biomonitoring studies could include the parent chemical, metabolites and other chemical products formed in the body or the environment (e.g., hemoglobin adduct; environmental degradation product). The approach for biomonitoring a chemical may change as methods development proceeds. For some of the parent chemicals listed below, metabolites or other targets for measurement are shown indented underneath. Chemicals are grouped into categories (like "metals" and "pesticides"); some are included in more than one category. The Program determines the chemicals that are actually biomonitored and the appropriate targets for measurement. To jump to each footnote referenced in the list below, click on the relevant number.

Propylene oxide
N-Acetyl-S-(2-hydroxypropyl)-L-cysteine
Styrene
N-Acetyl-S-(1-phenyl-2-hydroxyethyl)-L-cysteine
N-Acetyl-S-(2-phenyl-2-hydroxyethyl)-L-cysteine
Mandelic acid
Phenylglyoxylic acid
1,1,2,2-Tetrachloroethane
Tetrachloroethene (Perchloroethylene)
N-Acetyl-S-(trichlorovinyl)-L-cysteine
1,1,1-Trichloroethane
1,1,2-Trichloroethane
Trichloroethene (Trichloroethylene)
N-Acetyl-S-(1,2-dichlorovinyl)-L-cysteine
N-Acetyl-S-(2,2-dichlorovinyl)-L-cysteine
Toluene
N-Acetyl-S-(benzyl)-L-cysteine
Vinyl chloride
N-Acetyl-S-(2-hydroxyethyl)-L-cysteine
m-Xylene
N-Acetyl-S-(dimethylphenyl)-L-cysteine
3-Methylhippuric acid
o-Xylene
N-Acetyl-S-(dimethylphenyl)-L-cysteine
2-Methylhippuric acid
p-Xylene
N-Acetyl-S-(dimethylphenyl)-L-cysteine
4-Methylhippuric acid

Notes

- ¹ All members of the chemical group are designated chemicals, including, but not limited to, the chemicals shown.
- ² Diesel exhaust is a complex mixture that contains many components, one or more of which may be useful as an indicator for biomonitoring.
- ³ All members of the chemical group are not designated chemicals; only the specific chemicals listed are designated chemicals.
- ⁴ These brominated phenols are part of the chemical group “brominated and chlorinated organic chemicals used as flame retardants”, which are listed as designated chemicals. The brominated phenols are also included in the category “environmental phenols” because the laboratory measures them with other environmental phenols.
- ⁵ These chlorinated phenols, with the exception of triclosan, are metabolites of certain pesticides that are listed as designated chemicals. These chlorinated phenols are also included in the category “environmental phenols” because the laboratory measures them with other environmental phenols.
- ⁶ Includes *n*-butylparaben and isobutylparaben.
- ⁷ Triclocarban is not a phenol but can be analytically measured with environmental phenols. When it is released into the environment, it is commonly found in the same environmental media as triclosan.
- ⁸ CDC measures nitrate and thiocyanate along with perchlorate, because all three anions can affect iodine uptake by the thyroid.
- ⁹ A chemical is a perfluoroalkyl substance if all carbon atoms, except for carbon atoms associated with functional groups (such as an aldehyde group), are fully fluorinated. In a polyfluoroalkyl substance, at least one (but not all) of the carbon atoms is fully fluorinated.
- ¹⁰ Fungicides, herbicides, and insecticides are grouped under the general heading of “Pesticides.”
- ¹¹ 1-Hydroxynaphthalene is the metabolite of both carbaryl and naphthalene. To determine the percent of 1-hydroxynaphthalene attributable to carbaryl alone, 2-hydroxynaphthalene (which is only a metabolite of naphthalene) must also be measured.
