

# **Biomonitoring California Program Update and Planning**

## **Discussion Questions**

Biomonitoring California Scientific Guidance Panel Meeting  
March 7, 2023

- Given the questionnaire data and analyte measurements available for ACE, what opportunities do you see for other research questions (for the Program or outside collaborators)?
- Community partnerships and educational efforts on Asian/Pacific Islander exposures to metals and PFASs have largely been focused in the Bay Area. What additional community groups or government entities do you suggest the Program work with?
- Are there additional questions regarding the overlap of PFAS biomonitoring and water testing that the Program should consider pursuing?
- The Program continues to meet with other researchers working on PFASs in drinking water that can complement or inform their work. Do you have additional suggestions for projects/organizations that they should contact?
- Do you have any feedback on the initial VOC and PAH results of SAPEP, including any insights or resources you may be aware of to further explore and interpret the 2-naphthol findings?
